

Deca-room

From the company ERBI lab.

erbi
acoustic & design lab

The Deca-room informal communication area is an alternative to the classic office space. Designed for negotiations, development of ideas, and individual work requiring concentration, or just for rest. This is a separate, acoustic (the walls are covered with sound-absorbing material), and comfortable area in your work environment, where you can find everything you need to work during the day.

Purpose:

co-working, negotiations, sound insulation,
design, efficiency, rest.

When creating the Deca-room, the designers of ERBI lab were inspired by the geometric shape of the dodecahedron, which can be found in natural crystals.

The Deca-room consists of 9 pentagonal panels bolted together with powder-coated steel brackets. There is a comfortable seat for 3 people and a pentagonal meeting table inside. 2 more people can sit outside.

Characteristics:

- The wall panels are made of ecological birch plywood.
- The base of the soft seats is made of plywood and chipboard covered with furniture foam and high-quality fabric.
- The floor consists of two parts of thick plywood covered with carpet.
- The legs are made of metal painted in black.
- Deca-room size (cm): 800x600, h=400;
- Metal table size (cm): 602x400, h=122.

Cost of the basic model:

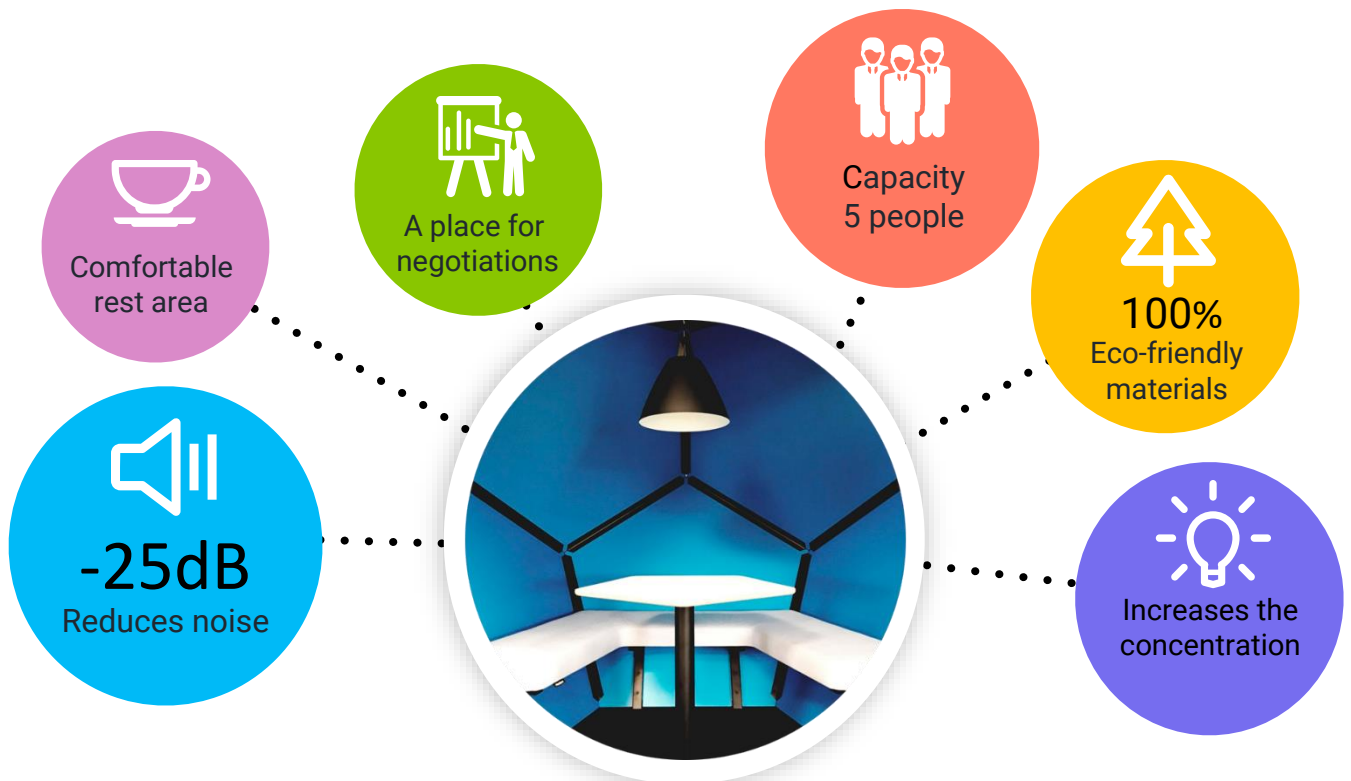

2500 USD

Delivery time: 20 days

Additional options:

- Acoustic panels inside +15000 UAH.
- LED lighting +5000 UAH.
- 220V socket and 2 USB +5000 UAH.
- Soft back cushions (3 pcs.) +6000 UAH.
- Painting in colour (all RAL palette) +4000 UAH.
- Bracket for screen or board +2000 UAH.
